

Parus bicolor. TUFTED TITMOUSE.—Everywhere common up to about 4000 feet elevation. At Bakersville and Cranberry I seldom took a stroll without hearing the whistle of this bird or seeing it with its young.

Parus carolinensis. CAROLINA CHICKADEE.—This bird was not frequently seen, and not observed at all above 5000 feet altitude.

Regulus satrapa. GOLDEN-CRESTED KINGLET.—On July 23, shot a young of the year at an elevation of 6000 feet; it was in company with the rest of the brood and the parents. Not common.

Merula migratoria. ROBIN.—Rarely seen in the lowlands, but common on the summit of Roan Mountain, where I found two nests with eggs in the balsams; altitude 6300 feet; others were brought to me which had been taken in the woods far from any habitation.

DESCRIPTION OF A NEW *EUETHIA* FROM OLD PROVIDENCE ISLAND.

BY CHARLES B. CORY.

Euethia grandior, sp. nov.

SP. CHAR. —General appearance of *E. bicolor*; but larger, the wing is much longer, and both mandibles are black.

Adult ♂ (Type, No. 10,274, Coll. C. B. Cory):—Head, throat, breast, and upper belly black; a patch of dull yellowish white from the belly to the vent; flanks and under tail-coverts dull olive green; back and rump olive green; quills brown, edged with olive green; tail greenish above, slaty brown beneath, and showing numerous indistinct bands when held in the light; bill black.

Length, 4.50; wing, 2.45; tail, 2; tarsus, .60; bill, .40.

The great length of wing seems to be constant in sixteen specimens from Old Providence. I have compared it with forty-four examples of *E. bicolor* from other localities.

Habitat. Island of Old Providence, Caribbean Sea.

RECENT LITERATURE.
